

Northern Spain

Spanish Greenish Black-tip *Euchloe bazae*

Euchloe bazae iberae Photo Keith Woonton

Spanish Greenish Black-tip *Euchloe bazae* is a Spanish endemic species and is confined to just two small but widely separated areas, located in Andalusia and Aragon respectively. In 2022 we resumed survey work which had been interrupted by COVID-19 on the northern population of Spanish Greenish Black-tip *Euchloe bazae iberae*. Further survey work in the Valcuerna area found more colonies although none were found in the colony about 20 km further south (an article on EBG work on *E bazae* over the years can be found in Newsletter 36).
